

THIS DRAWING IS TO BE USED ONLY FOR THE PURPOSE OF ISSUE AND IS SUBJECT TO AMENDMENT

Legend

-  Hackney Borough Boundary
-  High Risk of SW Flooding
-  Medium Risk of SW Flooding
-  Low Risk of SW Flooding

Notes

1. This map shows the predicted likelihood of surface water flooding based on the Environment Agency's Risk of Flooding from Surface Water (ROFSW) data, which may be subject to further analysis in the future. Further information is provided on the Environment Agency website (www.gov.uk/environment-agency).
2. The Risk of Flooding from Surface Water Flooding is divided into categories: High- each year the chance of flooding is greater than 1 in 30 (3.3%), Medium- each year, the chance of flooding is between 1 in 100 (1%) and 1 in 30 (3.3%), Low- each year, the chance of flooding is between 1 in 1000 (0.1%) and 1 in 100 year (1%), Very Low- each year, the chance of flooding is less than 1 in 1000 (0.1%).
3. The potential impact of surface water flooding can vary according to the depth of the water, and its velocity (speed and direction that it is flowing in).
4. Surface Water flooding happens when rainwater does not drain away through the normal drainage systems or soaks into the ground, but lies on or flows over the ground instead. This type of flooding can be difficult to predict and it is hard to forecast exactly where or how much rain will fall in any storm.
